

healthcare Fauquier Hospital Warrenton, VA

Comprehensive Wayfinding Program

Challenge: Fauquier Hospital is a non-profit community hospital which has been providing quality health care to the residents of Fauquier and surrounding counties since 1954. It is independently operated and locally governed by a board of directors, with no funding from state or federal agencies. The hospital began renovations and new construction in 2003, at which time 2/90 Sign Systems began working with them to design a comprehensive wayfinding program.

Solution: Fauquier Hospital's signs combine 2/90 Modular with custom design details. The enhanced elements compliment the facility's architecture while maintaining a consistent and flexible sign solution that is easy to update as the facility's needs change. A corrugated 3Form® material is used on all wayfinding signs as accent panels and a water-jet aluminum logo is applied for additional dimension. 2/90 provided a turn-key solution for the interior signage at this hospital serving a rural/suburban community in Virginia.

"We are very happy with the signs that 2/90 Sign Systems did for us. The signs are sleek, modern, professional, and a good match to our hospital's new architectural features. That the sign content can be easily updated along with our continued expansion is a real plus."
