

## Exterior Signage

Exterior Signs are fabricated with aluminum components to provide excellent durability in all weather conditions and present high-quality, distortion-free communication. State-of-the-art paint technology also ensures long-lasting finishes. You can choose from a variety of sign types – main identification, post and panel, wall mount and dimensional letters.

## Exterior Signage

2/90 Sign Systems has been manufacturing exterior and interior facility signage for three decades and is proud to be the supplier of choice to many prestigious corporate, educational, healthcare, hospitality and government clients. Our product quality exceeds industry standards for materials, fabrication and service. Rest assured that an investment in 2/90 signs and services will provide a favorable return-on-investment over the long haul.

2/90 is your total signage solution for all your wayfinding needs. Our fully integrated signage system makes planning, manufacturing, installation and maintenance for your entire facility effortless. You're certain to achieve comprehensive form and function to guide visitors and employees to, through and out of your building or complex with ease.

*2/90 uses extruded aluminum components to fabricate exterior signs. Aluminum has excellent durability in all weather conditions and provides high quality, distortion-free, aesthetics.*

2/90 incorporates state-of-the-art paint technology to ensure long-lasting finishes that are available in a palette of virtually unlimited colors.

## Main Identification

Main identification signage is usually strategically placed near a building or complex entrance. A wide assortment of extrusions is available to configure a seemingly limitless variety of sign designs.

Specification options include:

- Series 7, Series 12 (two, three and four-sided)
- Non-illuminated or internally illuminated encasements
- Sharp or radius edge detail
- Fixed or changeable panel faces
- Base plate, direct burial or custom mounting

## Post and Panels

Series 7 and Series 12 signs generally function as secondary wayfinding identification.

Specification options include:

- Panel depths of 7" or 12"
- Non-illuminated or internally illuminated encasements
- Fixed or changeable panel faces
- Variety of post configurations, reveal positions and panel options
- Base plate, direct burial or custom mounting

Manufacturing lead-times are four weeks or less upon client confirmation of sign specifications.

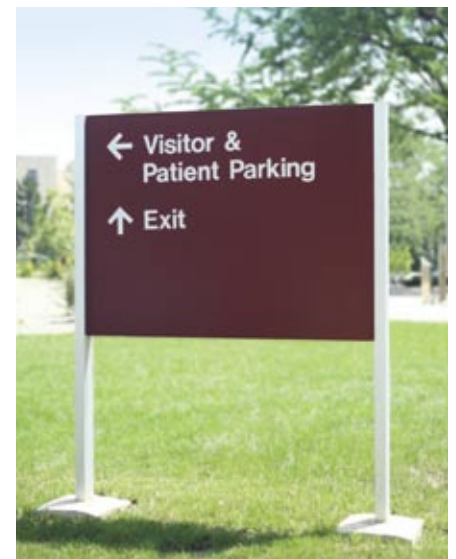

## Post and Panels

Series 2 and 3 Post and Panel signs are often used for directional signage to help visitors navigate around a facility or complex. These non-illuminated signs provide a wide variety of design options.

Specification options include:

- Panel depths of 1/8", 2", 3-1/4"
- Fixed or changeable panel faces
- Single post, double post or direct burial mount
- Variety of post configurations, reveal positions and panel options

## Wall Mount

Wall mount signs are often used for main identification, and are installed directly on a building facade. These signs can often provide greater visibility than a ground mounted sign.

Specification options include:

- Panel depths of 1-5/8", 3-1/4" or 7"
- Non-illuminated or internally illuminated encasements

All illuminated signs are UL approved for safety and long-term performance.

## Dimensional letters

Dimensional letters provide an alternative to wall mount signs in that they are generally used for main identification and installed on a building facade.

Specification options include:

- A variety of character sizes, thicknesses and fonts
- A variety of materials to include flat-cut metal (aluminum, brass, copper or stainless steel), flat cut acrylic and high-density urethane
- Non-illuminated or illuminated characters
